**Linguistics: Program-level student learning outcomes**

Upon completion of a Linguistics major at the University of Oregon, a student should be able, given appropriate data, to:

**Perform basic acoustic analyses of recorded speech sounds**

**Discover the phoneme inventory and basic phonotactic structure in a sufficiently large set of phonetically transcribed words**

**Analyze the morphological and syntactic constructions in a sample of glossed linguistic data**

**Design a laboratory or field research project in some area of linguistics**

**Read and demonstrate an understanding of current research literature in areas of linguistics taught in our program.**
